## PATENT COOPERATION TREATY

From the INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

To:

GERVASI, Gemma Notarbartolo & Gervasi S.p.A. Corso di Porta Vittoria 9 I-20122 Milan ITALIE PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(PCT Rule 71.1)

Date of mailing

(day/month/year)

12.09.2005

Applicant's or agent's file reference

3756PTWO/AG/la

IMPORTANT NOTIFICATION

International application No. PCT/EP2004/052235

International filing date (day/month/year) 17.09.2004

Priority date (day/month/year)

17.09.2003

Applicant

S.I.P.A. SOCIETA INDUSTRIALIZZAZIONE ...et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes; if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

Certain defects in the international application

The following defects in the form or contents of the international application have been noted: see separate sheet

### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document:

D1: PATENT ABSTRACTS OF JAPAN vol. 1996, no. 11, 29 November 1996 (1996-11-29) -& JP 08 174552 A (HAKKO DENKI SEISAKUSHO:KK), 9 July 1996 (1996-07-09)

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows:

A heated blow mould for making thermoplastic containers using the thermostabilizing treatment or heat-set process wherein a mould holder with a wall of a desired thickness is divided into two mirror shell halves each housing half a mould with a specific shape or making the container to be made comprising a heating system with a set of first electric heating elements placed parallel to the generator of the container to be made.

The subject-matter of claim 1 differs from this known blow mould in that it comprises second electric heating elements, which are substantially transversal to said first elements and placed in areas where more heat must be supplied, wherein said first and said additional electric heating elements are electrically connected to each other and wherein the first and second electric heating elements are placed between said mould holder and said mould.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

The problem to be solved by the present invention may be regarded as that the moulds get more expensive when the moulds themselves are equipped with heating elements and that separate heating elements applied outside the moulds normally results in a too low heat transfer.

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons:

### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/052235

The proposed solution is not described in any single prior art document or combination of prior art documents.

Claims 2-5 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

### Re Item VII

Note: The newly filed claims are considered to be allowable, but the description is not in conformity with these claims.

#### **NEW CLAIMS**

- 1. A heated blow mould (2) for making thermoplastic containers using the thermostabilizing treatment or heat-set process wherein a mould holder with a wall of a desired thickness is divided into two mirror shell halves each housing half a mould with a specific shape for making the container to be made comprising a heating system with a set of first electric heating elements (3, 4, 5, 6) placed parallel to the generator of the container to be made
- characterised in that it comprises second electric heating elements (7, 8, 9, 10), which are substantially transversal to said first elements and placed in areas where more heat must be supplied, wherein said first (3, 4, 5, 6) and said additional electric heating elements (7, 8, 9, 10) are electrically connected to each other and wherein the first and second electric heating elements (7, 8, 9, 10) are placed between said mould holder and said mould.
  - A heated mould as claimed in claim 1 wherein said first electric heating elements are tubular electric resistors and are arranged parallel to each other.
  - 3. A heated mould as claimed in claim 1 wherein said additional heating elements are placed at the top and bottom ends of the container to be made.
- 4. A mould as claimed in claim 1 wherein at least one of said heating systems is placed near the inside surface of the mould holder, while at least another of said heating systems is placed hearer the outside face of the mould.
  - 5. A mould as claimed in claim 1 wherein a layer of thermally insulating material is placed at the outside surface of the mould holder.
